The Senate has left for August recess, but the biodiesel tax credit extension is still sweating it out in Washington. Sen. John Kerry, D-Mass., has unveiled a new bill, titled "The Clean Energy Technology Leadership Act of 2010," to provide tax incentives for clean energy manufacturing, renewable energy and conservation.

Kerry's bill will extend the excise tax credit for biodiesel and renewable diesel retroactively for 2010 and through 2012, according to a statement by Kerry's office on the content of the bill. "While we continue to fight to bring comprehensive energy legislation to the floor of the United States Senate, it's essential that we take action to start moving in the right direction," said Kerry.

Without the tax incentive, the domestic production of biodiesel has nearly ceased. During the next weeks and months biodiesel values may raise due to limited supply. Upon extension of the tax credit, biodiesel values should return to current market values.

Ultra Green Energy Services (UGES) prepared for a possible expiration of the tax credit by purchasing, blending, and storing a substantial volume of biodiesel in 2009. "It is critical that we protect our customers when they need us the most" said Michael Cooper, UGES Vice President & Director of Sales and Trading. "Today, Ultra Green has leveraged its years of experience and success in risk management, biodiesel trading, and transaction finance to assure that our customers' contracted supply will be available in 2010 without interruption nor price increase."

Ultra Green Energy Services, is the Northeast US Premier Bioheat® dealer. In 2001, our principals were the first heating oil dealers in the U.S. to market a biodiesel blend as retail Bioheat™. Ultra Green Biodiesel is produced from NON-FOOD resources such as recycled oils and reclaimed fats from industrial processing. It is a clean burning, road tested replacement for more polluting petroleum based diesel and heating oil. It is cost effective because of lower commodity risk, domestic production, and reduced distribution costs.

NYMEX Heating Oil Price - June Delivery

Some companies talk the talk. **We walk the walk.**

Introducing Bioheat®
THE FUTURE OF HOME HEAT.

It's the first steps toward a cleaner and greener future.

To use energy more wisely, we have to learn to walk before we can run. Using a 5% biodiesel blend, Bioheat is a choice we can all feel comfortable with. It's home heating oil made with pure biodiesel – oil extracted from plants and other renewable sources. Think of it as baby steps. Important first steps toward reducing our demand for foreign oil. In fact, by using just a 5% blend, we could save 450 million gallons of regular heating oil annually. It even burns more cleanly with fewer harmful emissions and can be used with your current heating equipment. It's the right choice for today and tomorrow.

BIOHEAT

I'm comfortable with that.™

News

[UGES Bioheat featured in JAN 2009 issue of Biodiesel Magazine](#)

Gennaro, chairman of the NYC council's committee on environmental protection, stands next to a UGES delivery truck.

Michael Cooper, vice president of UGES, says he learned how to sell biodiesel by not being able to sell biodiesel. "I made my first sales call for biodiesel into the New York metro region on Oct. 31, 2000," Cooper tells Biodiesel Magazine. "I made for first long-term contract for biodiesel in the metro region on Nov. 1, 2007—seven years and a day later." He says his company was the first to blend biodiesel in heating oil and sell it as Bioheat in 2001 in

Maine. "Back then there was no excise credit and biodiesel was selling for \$3 a gallon and heating oil was 75 cents a gallon," he says. "It was a massive uphill battle."..... [CLICK FOR FULL ARTICLE](#)
