New Hyde Park, NY (November 5, 2008) – Business and individuals in New York who choose diesel fuel blended with **Ultra Green Biodiesel™** can reduce state and local taxes up to twenty percent. **Ultra Green Biodiesel™** is produced from NON-FOOD resources such as recycled oils and reclaimed fats from industrial processing. **Ultra Green Biodiesel™** is a clean burning, road tested replacement for more polluting petroleum based diesel and heating oil. **Ultra Green Biodiesel™** is cost effective because of lower commodity risk, domestic regional production, and reduced distribution costs.

Ultra Green Biodiesel™ is only available from the Northeast U.S. Premier biodiesel dealer, Ultra Green Energy Services, LLC (UGES). In 2001, UGES' principals were the first heating oil dealers in the U.S. to market a biodiesel blend as retail Bioheat®. Today, UGES has announced the major expansion of biodiesel blending operations at New Hyde Park Fuel Terminal (NHPFT) in New Hyde Park, NY centrally located to serve all of Brooklyn, Queens, and Long Island, New York.

UGES' expansion at New Hyde Park, in cooperation with New Hyde Park Oil Terminal which is owned and operated by Raymond A. Hart of Hart Petroleum, includes activation of a new rail spur on the LIRR to deliver rail cars of biodiesel directly to the wholesale terminal, expanded diesel fuel, heating oil and biodiesel supplies, wholesale biofuel cost management programs, and indexed daily and contract pricing. Michael Cooper, Vice President and Director of Sales and Trading says "Ultra Green Energy Services, LLC is the most experienced company in the Northeast U.S. integrating biodiesel in to the wholesale diesel fuel and heating oil markets. We have major advantages- this terminal will allow us to have the highest quality product with the lowest distribution costs- passing on these savings will encourage people to use Ultra Green Biodiesel."

UGES' expansion builds on success the company has had maximizing the economics- including a New York State and Local Tax Reduction for retail diesel fuel blended with twenty percent biodiesel. "When diesel fuel is \$3.00 per gallon, my customers are saving about 9 cents per gallon buying "B20" a blend of eighty percent Ultra Low Sulfur Diesel fuel and twenty percent biodiesel. My customers demand Ultra Green Biodiesel blends because they want a cleaner burning, domestically produced, renewable product that can be priced competitively to conventional diesel fuel" said Daniel Falcone, Owner of Total Fuel Services, New Rochelle, NY, and UGES Northeast Wholesale Manager.

Ultra Green Energy Services' management has over 40 years of leadership in the biofuels and petroleum sectors. Beginning with grain trading in the 1970's and ethanol project development and marketing in the 1980's, UGES' management's activities have led to the development of unique hedging strategies and financial facilities to promote biofuels production and sales. In 2001, our principals were the first heating oil dealers in the U.S. to market a

biodiesel blend as retail Bioheat™. UGES has achieved success bringing biofuels to the wholesale petroleum market, and is uniquely positioned as a major biodiesel marketer. Through our headquarters in Chicago and our northeast U.S. office in New York, UGES provides the best customer service and quality assurances in the wholesale biofuels industry. UGES has wholesale terminals located in New Hyde Park and Westchester County, NY; Southington, CT; and Newark and Elizabeth, NJ. UGES is a member of the National Biodiesel Board.
